food • clothing • medical care • education • hope

*a child dies every 15 seconds from waterborne disease

*thousands of hours are lost each day by women and children seeking safe water

*without clean water, chronic illness abounds... attendance at school & work drops ... education & work performance decrease

join us in providing
a clean water solution
for children & their families

Hydrad® BioSand
Water Filter

- *Patented technology which is based on the traditional slow sand filtering process in use for over 200 years
- *Convenient in-home, point-of-use filter (1 per home)
- *Each filter is able to provide enough clean water for **8-10 people per day** for an average of **10 years**.
- *Low maintenance: cleaned in place by user, no parts to replace, powered by gravity - not electricity
- *Filters up to **12.5 gallons per hour** with intermittent use
- ***Removes 99.8% of deadly parasites** with fully formed biolayer (forms naturally in about 2 weeks)
- *Works for all water sources (ponds, lakes, cisterns, rivers streams, shallow / deep wells, rain water, spring water)
- *Studies show filter use **reduces diarrhea by 47% - 62%**.
- *Improves health, strength to work, and ability to go to school. Reduces household labor burdens securing clean water. Saves wood/fuel used to boil water and reduces carbon footprint caused by use of stoves.

\$100

covers the cost of the filter, sand media, water bottle, educational materials, delivery to remote site, and expert installation assistance.

(\$10/year on average for a family of 10)

Check our website at
www.give2givehope.org
for our current goal and
up-to-date information
on filter units provided.

*Filters provided will be based on funds raised to meet pallet quantities (15 units per pallet).
